

OvuPred Ovulation Microscope

What is OvuPred?

OvuPred is an easy-to-use, reliable ovulation microscope that can predict the days of your ovulation period called fertile window. These are the days you are most likely to become pregnant.

With **OvuPred** Ovulation Microscope you can check anytime, anywhere whether you are fertile at the moment of testing or not. This simple, quick test helps you monitor your fertile days with high accuracy. Of course, you will recognize your infertile days, too.

OvuPred helps you save the costs of expensive, single-use ovulation tests you may need for a shorter-longer period of time. If you would like to have a baby, **OvuPred** shows you the days an intercourse may result in pregnancy. Should you, however, want to avoid pregnancy, **OvuPred** is of help again by showing your infertile days. Consequently, **OvuPred** Ovulation Microscope is a fully natural tool of family planning. All this, without any side effects.

The use of **OvuPred** Ovulation Microscope is simple. You put saliva or uterine cervical mucus on the slide of the microscope and let it dry in 8-10 minutes.

If, looking into the lens of the microscope, you see a mix of round, bubble-like, shapeless patterns you are infertile on that day. If, however, the picture has distinct fern-leaves it means you are fertile.
